eHandHeld

eHandHeld is a bar code (or key entry) based inventory counting, order shipping / receiving verification / validation program that makes these tasks fast, simple, and powerful. It can be also used for equipment Serial Number processing and tracking as well as other custom tasks. You can use eHandHeld as a standalone program, or integrated with QuickBooks® or eWholesale™.

eHandHeld employs powerful yet easy to use Portable Data Terminals / Barcode Readers.

eHandHeld makes inventory counting a breeze by using batch data collectors, such as the Symbol portable bar code readers. After scanning inventory labels and keying in the associated quantities, eHandHeld stand-alone module allows you to create either a text file or an Excel spreadsheet containing the products counted and their quantity.

From the created spreadsheet, you can upload the data into any Inventory Management System or use direct integration with QuickBooks® or eWholesale™

Multiple uploads using one or more Symbol units are supported, allowing the addition of comments in the created spreadsheet or text file.

eHandHeld can help streamline annual as well as perpetual inventory counts and verify incoming and outgoing items against Sales and Purchase Orders.

Inventory Shipping and Receiving can greatly benefit from increased accuracy and higher efficiency of Order Picking and Receiving processes.
